## Shift Schedule

Here is the LCLS and FACET Shift Schedule from Aug 13, 2018 – Dec 19, 2018.

This list of instructions apply to LCLS, ESTB, FACET-II injector and LCLS-II injector. The PD is responsible for coordinating activities for all programs. This will expand to include LCLS-II and FACET-II accelerators when they come online.

- 1) Conduct the 8 am accelerator progress meeting each morning to review the progress of the previous day, announce schedule modifications, and dispatch resources as required.
- 2) Give a summary of the day's proposed activities at the 8:15 meeting, as needed.
- 3) Meet with LCLS instrument scientists and users outside of the 8am MCC meeting to find out how things have gone so far and what can be improved.
- 4) Monitor and coordinate the activities in the controlroom (on call 24 hours per day).
- 5) The EOIC should inform you of long lasting down times (>4 hrs) or of other emergencies. Operations management (A. Brachmann) needs to be informed when any of the following occur:
  - a. Any Safety related issues.
  - b. Accelerator/beam downtime that is more than 4 hours or if an ETA is unclear.
  - c. Issues that require interfacing with the LCLS directorate, an example is if a user requests additional time beyond their scheduled experiment time.
  - d. Unusual events, even if beams are not affected. For example, a fire in our areas of responsibility.
- 6) For all user requests, such as extensions or modifications of experimental schedules or ad-hoc and unplanned changes of beam parameters, advise users to discuss all requests with the experiment's Point of Contact (POC). The POC will evaluate, coordinate and communicate any changes to the scheduled LCLS program through the LCLS and AD line management.
- 7) Help interface the operations staff with the various real-time demands of users and instrument scientists.
- 8) Help interface with the support groups to get needed repairs launched to minimize down times.
- 9) Initiate alternate programs if the primary program cannot continue.
